SGS Packaging Environmental Labelling Service for Global Markets

In recent years, variety of measures have been adopted by governments, authorities, and businesses to address environmental related issues. One of the topics is the use of environmental symbols for the convey of packaging characteristics and handling information for consumers. Hence, there is increasing number of symbols, logos, or pictograms can be found on the packaging over the market, both voluntary and mandatory.

New directives, regulations and guidance are popping up all over the world. For example:

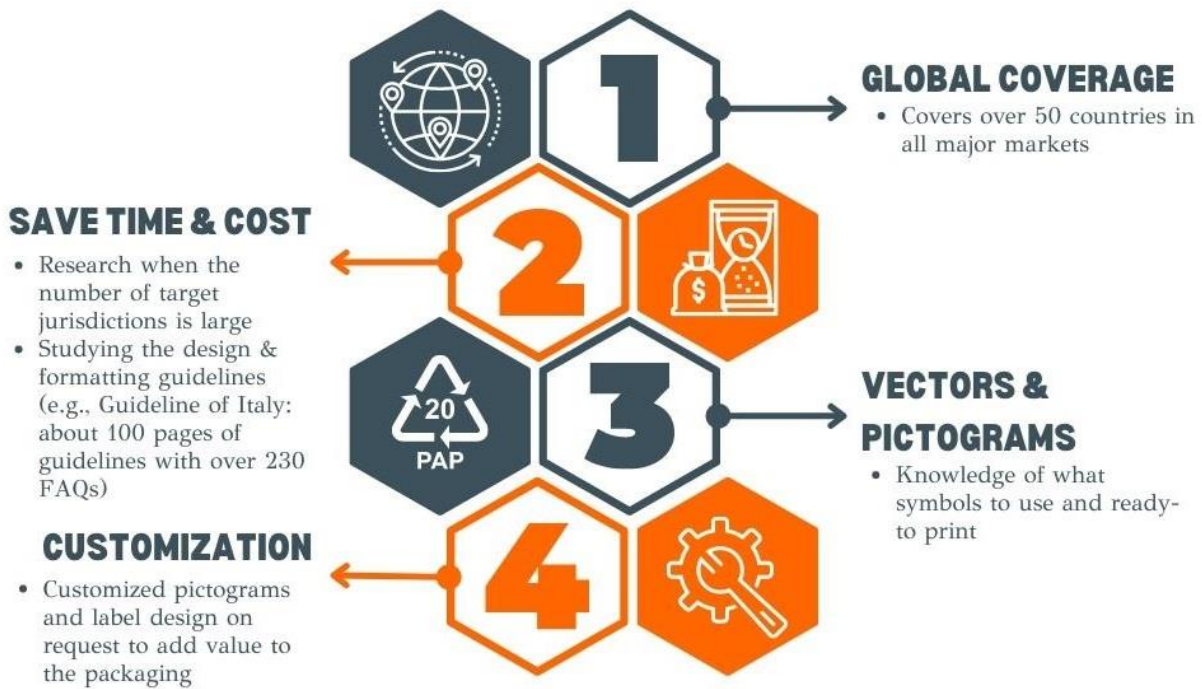

- EU published Directive (EU) 2018/852 of the European Parliament and of the Council of 30 May 2018 amending Directive 94/62/EC on packaging and packaging waste
- France, Italy, and other member states have adopted the directive and updated their packaging law respectively
- etc.

Yet, the requirements and the use of the symbols are not harmonized between countries & jurisdictions, stakeholders are confused to figure out exactly which and how to use these symbols, especially for those having a broad target market.

As a leader in sustainability services, SGS are committed to promote best-in-class practices in our sector and beyond. We are glad to introduce our new service on Packaging Environmental Labelling to help businesses to cope with the requirements in global major markets.

| SERVICE | SERVICE SCOPE | PRICE (USD) | TAT [^] |
