Promotional Offer: Restricted Substance Testing Services in Batteries

In September 2023, we [announced](#) that the European Union (EU) published [Regulation \(EU\) 2023/1542](#) on batteries and waste batteries. Not only will it replace Battery Directive 2006/66/EC, but also introduce requirements in many new areas of sustainability and safety of batteries and battery-operated products. This law will be implemented in phases, starting on February 18, 2024.

One of the important provisions is that it emphasizes batteries' compliance with Annex XVII of Regulation (EC) 1907/2006 (REACH), where more restrictions of chemical substances other than mercury, cadmium, and lead are set out.

To support your concern, SGS Hong Kong is offering a promotion package, focusing on the restricted substances content, to ensure the compliance of your batteries towards the requirements in Regulation (EU) 2023/1542.
